### **Задача №3.**

Для заданного набора данных произведите масштабирование данных (для одного признака) и преобразование категориальных признаков в количественные двумя способами (label encoding, one hot encoding) для одного признака. Какие методы Вы использовали для решения задачи и почему?

Закодировали признак name целочисленными значениями методом one hot encoding. В данном случае предпочтительнее метод label encoding, так как в кодируемом столбце много уникальных значений, а значит большой размер матрицы при one hot encoding.
